

Dear Member of Congress:

I am concerned about the future of cell phone service in rural Maine. For many, cell phones have become a necessary component of everyday life, helping us connect with businesses, keep in touch with friends and family and call for help in emergencies.

I understand that the FCC recently enacted a tough cap on the Universal Service Fund (USF), and is now considering proposals that would further reduce federal support for rural wireless services in Maine. Slashing USF support in half, as I hear the FCC's proposals would do, is crazy. Who doesn't get upset when they drive through an area with no cell service? Does the FCC really think everyone has service?

Less USF support for rural wireless networks will leave poor coverage, dropped calls and dangerous dead zones in areas of Maine that will certainly threaten public safety and economic development. In this day and age, how can the government let that happen?

I urge you to protect all residents of Maine by ensuring that the government continues to fund rural wireless services. Please call or write the FCC and tell them not to leave rural America behind.

Sincerely,

Harley Jamison
